

Fiber Dispenser For Mobile Concrete Plants *Fiber bobbins installation*

Open the box

Get the bobbin out of the box

Pull all the mixed strands out of the bobbin until the inside looks well winded.

Do not pull out the strand which comes out of the wrap (which is tied with the strand coming out of the inside of the bobbin). Just cut it.

Cut also the strand coming out of the inside to separate it from the mixed strands.

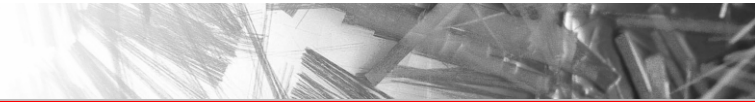

And hide the strand coming out of the wrap under the wrap

We get now one strand coming out of a "clean" bobbin

Make pass the strand through the hole from the top to the bottom up to the cutting system. Make sure every single fiber of the strand is introduced in the same hole among the 3 which are available.

Place the bobbin

Hold it a little bit while chopping the strand in excess

The system is now ready to work!
