Dear Mr. Knepp:

Just a note to express to you how satisfied we are with our V/M Fiber Feeder. This machine has solved every problem we have had in fiber delivery in our dry cast concrete plant: it gives us selective delivery, eliminates waste and does not run out of fiber.

Using the machine has allowed us greater flexibility in production scheduling and has saved us money by allowing us to dose fibers only in those parts of our products where they help us: no more putting fiber in the whole pipe when we only want it in the bell and spigot. No more putting fiber in the whole batch when we only want it in the one non-reinforced pipe.

In short, it's a godsend. The ability to only add fiber where the fiber is needed is a great help for production flexibility, a terrific cost saver, a serious reducer of handling damage and, in short, the Q/C departments favorite machine.

We couldn't be happier. Keep up the good work.

Respectfully:  
W.T. Liston Co.

Pat Wm. Liston
